Do not use the LED status indicators as evidence of applied voltage. If using this switch in an application that includes an electronically commutated motor (ECM), see Veris Application Note VN61, at www.veris.com.

\*VFD systems generate fields that can disrupt electrical devices. Ensure that these fields are minimized and are not affecting the sensor.

# Detect Belt Loss, Coupling Shear, And Mechanical Failure

# **FEATURES**

The H809 has a low (0.75 A) minimum setpoint...eliminates the need for multiple wraps of the conductor through the sensor even on loads as small as 1/5 HP

PROOF OF Maximize Reliability

- H609 and H809 are small in size to fit easily inside small starter enclosures
- Removable mounting bracket optimizes field versatility
- Bracket on H909 can be installed in three different configurations...added flexibility
- Status LEDs for easy setup and local indication
- Adjustable trip point...precise current trip point setting
- Detect belt loss and mechanical failure...ideal for fan/pump status monitoring
- Easier to install than differential pressure switches... eliminates tubing
- 100% solid state...no moving parts to fail
- 5-year warranty

#### DESCRIPTION

Hawkeye x09 Series are high performance current switches, ideal for line voltage loads. The devices are powered by the current being monitored. They are ideal for monitoring performance on unit vents, exhaust fans, recirculation pumps, and other fixed loads.

### APPLICATIONS

- Detecting belt loss, coupling shear, mechanical failure, and interlocking loads
- Verifying lighting circuit and other electrical service run times
- Monitoring status of industrial process equipment
- Monitoring status of critical motors (compressor, fuel, etc.)
- VFD output On/Off status
- Fan/pump status monitoring
